Talk with us about why clinicians are turning to nVoq.Voice as their documentation standard.

" nVoq.Voice has really improved my ability to multitask! I can now talk and dictate while I'm doing another task with my hands. It's not only improved my efficiency, but also reduced the strain on my arms/hands caused by a lot of typing. I use it for longer bits of text to save time and fingers!"
—Dr. E.

"I am a very fast typist; I did not think I would like using nVoq.Voice but I love it! It has been great—helping me save time while improving spelling and making proofing my note easier. I also find that it's very helpful when adding numbers such as a date of birth, phone numbers, and patient ID numbers. I would highly recommend this to other clinicians because it saves time and it's easier to add details!" —Nurse K.
